Bangaluru, India

Experience

Lead Engineer - Digital Banking

March'26 - Present

Technologies - Java (17, 21), Kotlin, Springboot, REST APIs, Junit, Gatling, Github Actions, OpenAPI

Project Details

- Designing and Developing the Digital banking space, Re-Architecting the Old systems
- Designing the flow for migration of Data from old IBM DB2 to Postgrsql using Kafka connector with zero downtime
- Developing highly scalable modern systems for instruments domain to maintain mandates, plan for Consumer as well as corporate card holders
- Serving multiple country domain including SEPA markets as well as US, Mexico and Canada markets too.

Senior Engineer - Retail Payments Platform

September'23 - February'26

Technologies - Java (11, 17), Kotlin, Micronaut, REST APIs, Chef, Consul, Junit, Jmeter, Vela pipeline, OpenAPI

Project Details

- We are developing a secure service for all payment related transactions using different payment methods like applepay, mastercard, visa, discover etc.
- Writing clean code with proper Junit coverage and keeping in mind all PCI compliances
- Writing Jmeter scripts for performance KPI metrics.
- Using Vela pipeline creating Jars and upload them in Jfrog bin repo
- Ubuntu packaging of coded jars
- VMaaS instances ubuntu based used for deployment
- Writing Chef recipes to automate the deployment and manage multiple Servers in dev, stage, prod environments
- Always followed Code first approach

Software Development Engineer - Supply Chain Management

April'22 - August'23

Technologies - Java (11, 17), Springboot, REST APIs, Kafka, Postgres DB, Junit, K6, Jenkins pipeline, Swagger API

Project Details

- Creating clean code for inventory management at RDCs with label printing integration with zebra printers
- Kafka event processing to trace out all the detailed event on every purchase order and their current status updated in DB
- Junit for code coverage
- Jenkins as CI/CD pipeline
- K6 for performance KPIs
- Always followed Code first approach

Software Developer Experienced - Research & Development

July'19 - April'22

Technologies - Java (11, 17), Springboot, REST APIs, GraphQL APIs, Kafka, Couchbase DB, Junit, Jenkins pipeline, Redhat Openshift

Project Details

- Developed enriched customer billing system for clients like Vodafone Germany, AT&T, Sprint, T-Mobile etc.
- Developed backend for Internal Drag-n-Drop based UI development platform
- Developed backend for server side UI rendering (JSON based UI components)
- Developed GraphQL APIs as client layer for UI for fast rendering
- Deployment on Redhat openshift
- Always followed API first approach

Education

Indian Institute of Technology - Dhanbad
Mtech - Computer Sceince Engineering
CGPA - 8.52 (2017-2019)

Hindu School
WBCHSE Board
Percentage - 76.4% (2011-2013)

Maulana Abul Kalam Azad University of Technology
Btech - Computer Sceince Engineering
CGPA - 8.06 (2013-2017)

Baranagore ramkrishna Mission Ashrama High School
WBBSE Board
Percentage - 84.88% (2001-2011)

Projects

Income-qualification (Inter-American Development Bank)

Worked with huge dataset of 9500 datapoints with 141 features. It's a multiclass classification Problem. As part of these project primary identification was to identify the target variable. Understand the type of the data and if there any bias. Check the poverty level of houses and depending on them classify the income group.

Mercedes-Benz-Greener- Fuel Emission Prediction

Worked with huge dataset with 385 features. Performed exploratory data analysis on the dataset. Removed column with zero variance, applied label encoder for categorical features. Dimentionality reduction using covariance matrix, eigen values, PCA, Wrapper method, filter method etc. At the end concluded the project using ensemble learning for regression

Research

An Improved Non-Local Means Denoising Technique for Brain MRI

https://link.springer.com/chapter/10.1007/978-981-13-9042-5_66

MRID-CNN : MRI Denoising Technique using convolutional neural network

I have developed a model using residual learning based technique. Trained our model with simulated dataset provided in brainweb website and tested on Simulated as well as originally collected medical dataset from hospitals.

In peer review: IEEE Signal Processing Letter Journal

Achievements

- Scored 99.02 percentile in GATE 2017
- Lead College Team twice in College level football Tournament

Skills

- Java (8, 11, 17), Kotlin
- Springboot
- Micronaut
- Webflux
- Kafka
- Junit
- Jenkins
- Jmeter / K6 / Gatling (Performance)
- Ubuntu Servers
- Chef automation

Interests

- Competitive Coding
- Machine learning
- Latest Technology
